PROFESSIONAL SUMMARY

Data analyst experienced in building KPI dashboards, automated reporting pipelines, and forecasting models that turn fragmented operational and financial data into decisions stakeholders trust. Skilled at consolidating multi-source data, validating accuracy, and partnering with engineering and leadership to scale analytics infrastructure.

TECHNICAL SKILLS

- Data Analytics & Reporting:** KPI dashboards, trend and cohort analysis, automated multi-source reporting, data validation, variance analysis
- Querying & Languages:** SQL (joins, aggregations, CTEs, window functions), Python (pandas, NumPy)
- Visualization & BI Tools:** Power BI (DAX, Power Query), Tableau, Streamlit
- Forecasting & Modeling:** Revenue and volume forecasting, financial modeling, performance and retention metrics
- Data Infrastructure:** PostgreSQL, Snowflake, AWS, Azure, REST API ingestion, ETL/ELT workflows, dbt, Airflow
- Collaboration:** Cross-functional partnership with engineering and product teams, stakeholder reporting, technical documentation

EXPERIENCE

- Data Analyst Intern** | *ITMC Systems, Boston, MA* Jan. 2025 – Jul. 2025
- Built unified KPI dashboards consolidating data from five previously siloed operational sources, giving four leadership teams a single, reliable source of truth for tracking daily performance against defined growth targets.
 - Identified three teams duplicating five-plus hours weekly of manual reporting, presented findings directly to leadership, and automated the entire workflow end to end, eliminating redundant report preparation across the organization.
 - Implemented automated validation checks and anomaly flags across all reporting datasets to catch source inconsistencies before they reached stakeholder dashboards, maintaining zero data errors over a continuous three-month review period.
 - Introduced a structured requirements intake to replace ambiguous one-off requests from three teams, translating needs into documented KPI definitions that cut dashboard revision cycles from four rounds to two.
- Data Analyst** | *Bajrang Engineering, Ahmedabad, India* Feb. 2021 – Jul. 2023
- Analyzed transportation and parts movement data to identify demand patterns and inform supply planning decisions, ensuring machine components were efficiently allocated to meet the requirements of each operational work order.
 - Maintained and updated machine parts inventory records across multiple product lines, ensuring data accuracy and enabling procurement and operations teams to make reliable planning decisions based on current stock status.
 - Identified inefficiencies in inventory tracking and parts allocation workflows, standardized the underlying data management process, and improved overall inventory accuracy for the engineering operations team and its procurement partners.
 - Coordinated parts fulfillment by matching incoming work order requirements to available inventory, ensuring technicians received the correct components on time and maintaining accurate records of all parts movement and usage.

PROJECTS

- SEC EDGAR Financial Analytics Pipeline** | *Python, SQL, PostgreSQL, Excel* Jan. 2026 – Present
- SEC filings arrive as deeply nested, inconsistent records; built an extraction and validation pipeline normalizing data into six structured tables across **2K+** companies, enabling revenue and EPS trend analysis.
 - Identified data quality issues across company filings, developed automated validation checks and documented data structures and calculation logic, ensuring every figure used in downstream forecasting was fully traceable and accurate.
- Investment Portfolio Analytics Platform** | *Python, SQL, Streamlit* Jan. 2026 – Present
- Engineered an analytics platform ingesting market data from **5 providers** on a daily automated schedule, computing performance KPIs including VaR, Maximum Drawdown, and Sharpe/Sortino ratios for ongoing trend monitoring.
 - Built an interactive dashboard delivering automated daily performance analytics with self-service drill-down, replacing manual periodic rebuilds and giving stakeholders always-current investment metrics without waiting on manual report cycles each week.
- CMS Open Payments Financial Data Pipeline** | *Python, SQL, Excel, Power BI* Oct. 2024 – Jan. 2025
- Raw healthcare payment records lacked structure for trend tracking; built an ingestion and validation pipeline processing **500K+** records into a clean, reporting-ready dataset for stakeholder review and ongoing oversight.
 - Analysis surfaced that **22%** of payments concentrated among **5%** of providers, a cohort-level pattern documented in a stakeholder report with a reusable monitoring template for future reporting cycles across the program.
- Medicare Claims Analytics Pipeline** | *Python, dbt, Snowflake, Airflow* Feb. 2025 – Apr. 2025
- CMS Medicare Part D claims data spans **50+** provider specialties with no standardized structure; built an automated, orchestrated pipeline transforming raw claims into audit-logged, analysis-ready tables for downstream review.
 - Designed HIPAA-aligned data handling and validation checks throughout the pipeline, ensuring traceable transformations across every stage and giving downstream analysts a reliable, fully documented source for ongoing reporting needs.

EDUCATION

- Northeastern University, Boston, MA** Sep. 2023 – Dec. 2025
Master of Science in Applied Machine Intelligence — GPA: 3.93/4.00
- LDRP-ITR, Gandhinagar, India** Aug. 2019 – May 2023
Bachelor of Science in Computer Science

CERTIFICATIONS

- Microsoft Certified: Azure Data Fundamentals (DP-900)** — Completed
- Microsoft Certified: Power BI Data Analyst Associate (PL-300)** — In Progress
